Financial Performance and Dividend

Due to the reduced demand for mineral drilling services, particularly in the first half of the financial year as well as a suspension of the underground production drilling division in the last quarter saw the full year revenue result down 20% on last year's result.

Swick achieved full year revenue of \$117.6 million with an EBITDA of \$16.5 million for the 2014 financial year, a reduction of 20% and 46% respectively over FY2013. These results were slightly ahead of the Company's market guidance for revenue and EBITDA of between \$113m to \$117m and \$14m to \$16m respectively.

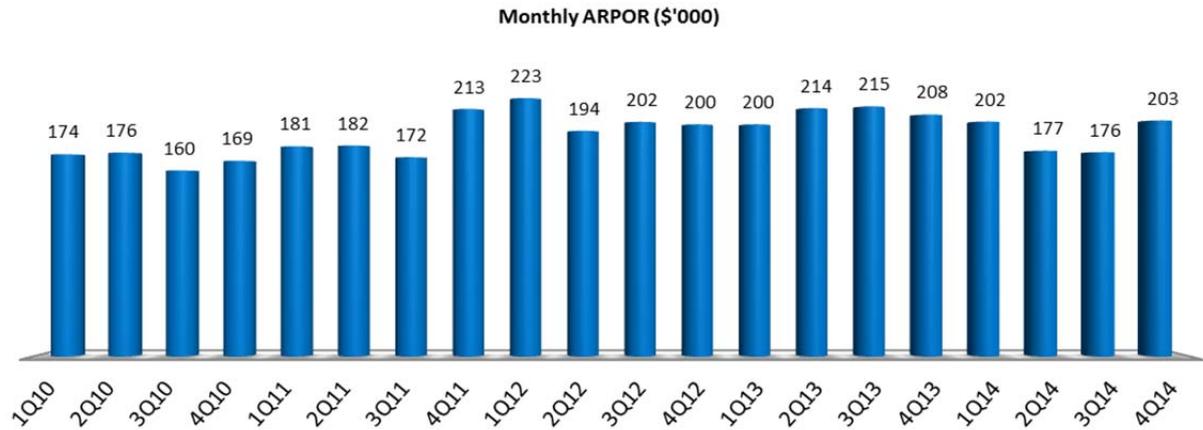

The year ended 30 June 2014 was impacted by lower demand from the client base as a result of reduced budgets and cost saving measures as mining companies, globally, focused on conserving cash. Despite the continued challenging conditions with the global drilling market Swick completed the last quarter of the 2014 financial year with a record number of metres drilled within its core Underground Diamond division. This record was on the back of recent contract wins in both Australia and Internationally.

The Group's revenue and EBITDA profile over the past five years is graphically illustrated below:

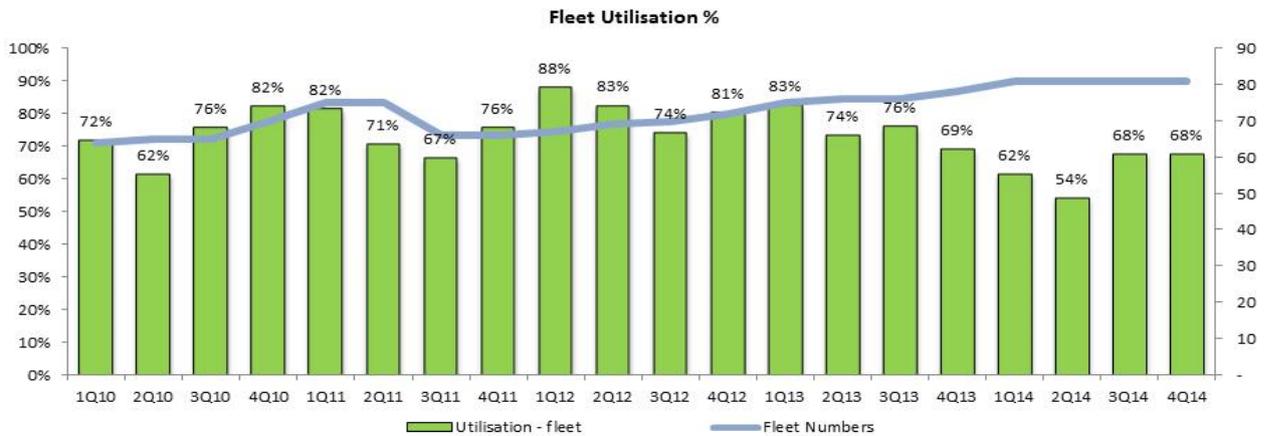

With the continued volatility within the commodity markets and particularly the ongoing weakness in gold and copper prices, mining companies continue to tightly manage cash costs within their businesses. Although this continues to be an extremely tough market for mining services companies, the Company believes that the advantages of its world leading underground diamond drilling technology continues to demonstrate its value to our customers. As a company we are committed to delivering a safe, efficient and productive low unit cost solution to our customers. The graph below shows the Swick Average Revenue per Operating Rig (ARPOR) from FY10 through to FY14. ARPOR was adversely impacted through the middle of the current financial year with the tougher operating environment seeing clients demobilising rigs around Christmas and some converting to single shifts. Following a period of bedding in new contracts in 3Q14, the Average Revenue per Operating Rig (ARPOR) improved in 4Q14 to levels achieved in the beginning of the financial year. This

followed a period of rig demobilisations and re-mobilisations affecting average revenues in the middle part of the year.

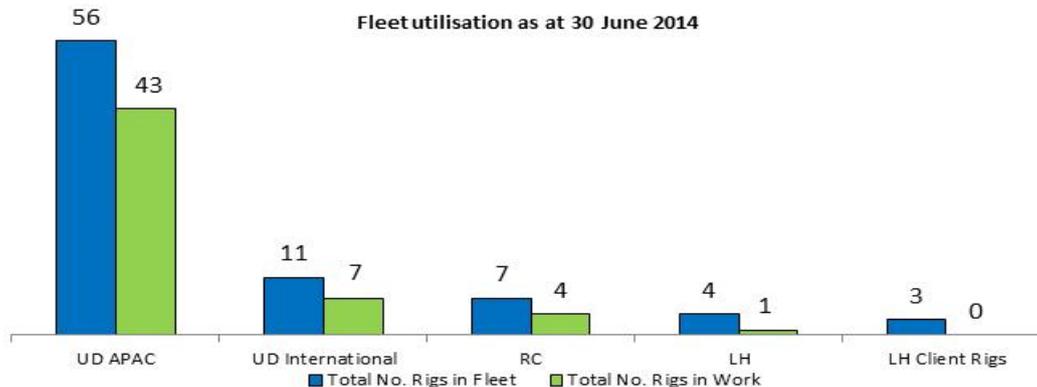

The Company's rig utilisation ended the year at 68%, only slightly lower than the end of FY13. Although utilisation in the current market remains difficult to forecast accurately, Swick does expect the current level of utilisation to continue through the first half of FY15. Throughout FY14 total rig numbers remained unchanged, with rig production halted in line with market conditions.

Despite the general macro market for mineral drilling remaining subdued, there is a significant amount of new work available in upcoming tenders.

The year-end utilisation by operating division is shown below;

The LH Division recommenced operations of the of the client rigs 1Q15 following an unscheduled mine shut down that affected the division over the last four months of the FY2014 period.

With Swick's focus on continual improvement in all areas of operations and safety management, our goal is to provide the highest quality, best value service available to our clients.

The Company is pleased to announce the declaration of a fully franked final dividend of 0.2 cents per share. The dividend record date will be the close of trade on Friday 19 September 2014, with the payment date being Monday 20 October 2014.

Commentary on FY14 Performance

Kent Swick, Managing Director stated: *"The financial year of 2014 was a year of two halves for our business. The first half saw a consistent decrease in drilling spend by our existing clients who cut back where possible, any discretionary spend. The second half saw a recovery due to additional work won by the business and in the latter part of the year, many of our clients that had previously suspended rigs, recommenced drilling."*

"I believe Swick recognised the needs of its clients and did what it could to offer the client base more competitive rates. The Company's challenge is now to effectively integrate and benefit from new technologies and operating systems developed in house to improve productivity."

"The best Company's do their best work in tough times and I am very proud of the efforts made throughout the business from the executive to the site crews in improving efficiency, removing waste and focusing on always delivering a quality product to the clients. I have received a lot of personal feedback from our clients in recent times, congratulating the Company on its improvements in quality and operating performance despite the difficult market."

"In a period of time where the output of Companies in our sector can easily deteriorate, Swick has maintained its core focus of safety, productivity and quality."
